DRAINAGE CHANNEL

Whitsunday Aviation Village Estate, Airlie Beach

Installed by Groundwork Services

CLIENT: Civdec Constructions

Date: 2008

PRODUCTS: Rock Mattress

PROJECT OUTLINE: A unique development in the Whitsunday region of Queensland required the need for a substantial open drain to be constructed to cater for stormwater runoff.

Over 4000m² of rock mattress was placed along the boundary of the airport development that required the need for coordinated tasks with the contractor to achieve the required design outcome.

The works were completed on time and additional variations were also completed within the project timeframe.

The contractor provided a letter of support to Groundwork Services for their approach to the project and the manner in which the tasks were managed.
