ROOTGUARD

Manufactured from a 1mm HDPE, RootGuard is designed to protect pipes, surfaces and structures against root damage.

RootGuard is normally placed between the tree and what ever you wish to protect. The preferred method is placing the barrier along beside the path, building, pipe etc.; try not to surround the tree. When the roots hit the HDPE layer it encourages them to go down rather than sideways preventing intrusion. If you wish to stabilise moisture in reactive clays under the structure, a deeper barrier may be required.

600mm x 30m	Roll
900mm x 30m	Roll

Other sizes available upon request
