Polypad

A quick, easy and effective form of retro-fit tactile indication, Polypads are manufactured from a strong, flexible, UV resistant polymer, made to last in the elements as well as putting up resistance to everyday spills, harsh chemicals such as oils and solvents. Due to their flexibility, polypads can be easily trimmed to suit any application. With a base thickness of 2.5mm and stud height of 5mm, polypads require no recess for installation, and provide no trip hazard.

Polypads are R11-rated Slip-resistant products.

Polypads are often conveniently placed in front of building entrances, but are also commonly seen on cement ramps and walkways along footpaths, streets and carparks.

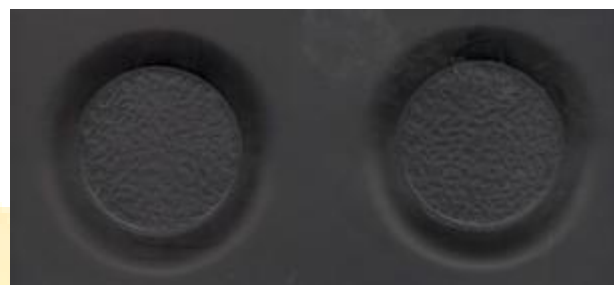

Cairns Tactiles installations involving Polypads can be seen at Smithfield Shopping Centre, Cairns Airport carpark, and at entrances of Bunnings Warehouse in Cluden, Townsville.

Polypads are available in a multitude of colours to meet luminance contrast standards for basically any substrate. They come as a retrofit design in either Hazard or Directional form.
